CODIFICATION OF THE PROPERTY OF THE UKRAINIAN SECURITY AND DEFENCE FORCES

It is noted that the current Ukrainian legislation currently provides for the codification of property (supplies) only for State bodies (military formations) belonging to the Ukrainian defense forces.

The purpose of the codification is to improve the efficiency of supply chain management at all stages of the life cycle, to provide the necessary conditions for automated accounting, to improve stockpile management, and to promote the compatibility of the logistics systems of the Ukrainian defense forces with the logistics systems of other countries that use the NATO codification system.

The main objective of the codification is to assign a NATO nomenclature number to each item of supply.

The NATO Codification System is a logistics nomenclature management tool that fulfills three main objectives of logistics: improving logistics performance, reducing overall costs by preventing the identification of duplicate items, and promoting interoperability.

The security forces include law enforcement and intelligence agencies, special-purpose State bodies with law enforcement functions, civil protection forces and other bodies tasked by the Constitution and the laws of Ukraine with ensuring the national security of Ukraine, and the defense forces – the Armed Forces of Ukraine, as well as other military formations, law enforcement and intelligence agencies and special-purpose bodies with law enforcement functions established in accordance with the laws of Ukraine.

The analysis of the main regulatory legal acts regulating the procedure of codification of supply items is carried out, as well as the benefits for the sphere of interests of the state and objects of management, which appear during the implementation of the system of codification of supply items of NATO.

It has been established that, in order to implement the areas of State national security policy defined by the National Security Strategy of Ukraine, to implement the tasks set out in the National Guard's Development Concept for the period up to 2020 and other regulatory documents aimed at ensuring effective cooperation between the security and defense forces in the performance of their functions to ensure the defense of the State, it is advisable to extend the scope of the regulatory and legal instruments on the codification of emergencies to the Ukrainian security forces.

Keywords: codification, supplies, security forces, defense forces.
