## **TECHNICAL QUALITY CONTROL OF UNIFORMS ( UNIFORMS-STYLE CLOTHES)**

The article deals with the peculiarities of technical control of uniform samples (uniform-style clothes).

Technical quality control is the basis of any method of quality management as in Ukraine but also abroad. Quality control is understood as verification of conformity of quantitative, qualitative characteristics of products or process, on which the quality of products depends on the established technical requirements.

Technical control of uniforms (uniforms-style clothes) includes checking the compliance of products (samples) with the established technical requirements and standard. Its essence consists in obtaining information about the state of the object of control and comparing the obtained results with the established requirements fixed in drawings, standards, supply contracts and the like.

The current classifications of types and methods of garment control require improvement in accordance with each product range. The article considers the peculiarities of technical control of garments. The basic types of technical control, as well as methods of quality control of garments are defined. On the basis of the conducted analysis of types and methods of control the table of basic principles of carrying out of scientific and technical examination of samples of uniform (uniform-style clothes) is made.

Research of types and control methods for uniforms (uniform-style clothes) was carried out by the method of theoretical and analytical research on existing classifications of types and control methods for garments.

The novelty of receiving the findings lies in the fact that on the basis of theoretical research the objects, methods, means of checking the uniform samples are determined, and also the table of basic principles of carrying out the scientific and technical examination of the uniform samples (uniform-style clothes) is compiled.

The author concludes that the process of scientific and technical expertise of items (kits) of uniforms (uniforms-style clothes) is an important milestone for obtaining high-quality uniforms (uniform-style clothes).

The research results can be used in the process of scientific and technical expertise of items (kits) of uniform (uniform-style clothes).

**Keywords:** technical control, method, quality, uniform, uniform-style clothes.
